5. Объяснение результатов работы программы:

Пользователь вводит команду , и если команда была push -координаты фигуры. Далее программа выполняет определенное действие с очередью взависимости от команды и либо возвращает определенное значение ,либо нет.

6.Вывод:

В данной программе показывается, как создавать контейнеры, благодаря которым упрощается дальнейшая работа с различными типами данных, потому что контейнер будет работать одинаково с любыми типами данных.
